

MUHAMMAD AWAIS RAZA

Aspiring AI/ML & Python Developer

+92 326 2050209 | awaisrazaansari1111@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

BS Artificial Intelligence student (UET Lahore) building a strong, practical Python foundation for AI/ML and Python-developer roles. Hands-on experience with Pandas and NumPy for data analysis, integrating LLM APIs (Claude, Grok, Groq) into working applications, and shipping self-directed and internship projects with clean, documented code. Comfortable with OOP, DSA, Git/GitHub, and end-to-end API integration.

EDUCATION

BS Artificial Intelligence — University of Engineering and Technology (UET), Lahore 2025 – 2029
• Cumulative CGPA (2 Semesters): 3.74 / 4.00

TECHNICAL SKILLS

Languages: Python, C++, C, JavaScript (basics), HTML, CSS

Python & Data: Pandas, NumPy, OOP, file handling & JSON persistence, data analysis & reporting, CLI application design

AI / ML & APIs: Anthropic Claude API, xAI Grok API, Groq API (Llama 3.3 70B), Puter.js, API key/auth configuration, prompt-based chatbot design

Core CS: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP)

Tools & Platforms: Git, GitHub, GitHub Pages, VS Code, Android Studio, Ionic/Capacitor

Other: Technical writing, vibe coding professionally, build-in-public documentation (GitHub + LinkedIn)

EXPERIENCE

Python Programming Intern — DecodeLabs (Remote) 2026 · 1 Month

- Completed a remote, one-month Python Programming internship, building and delivering a series of reviewed Python CLI applications.
- Built a To-Do List CLI app in Python with add/view/remove functionality and JSON-based task persistence.
- Developed an Expense Tracker CLI using accumulator patterns for running totals and try/except handling for invalid input.
- Built a cryptographically secure Random Password Generator using Python's secrets module, string.ascii_letters, and string.digits.

Independent AI/Python App Developer — Self-Directed / Build in Public 2025 – Present

- Designed and shipped Python and cross-platform AI applications, including a dual-model (Claude + Grok) Android AI chat assistant with end-to-end API integration.
- Built Python projects applying Pandas and NumPy for data analysis, reporting, and automation, alongside console applications using clean, modular architecture.
- Documented the build-in-public process across GitHub and LinkedIn, maintaining a personal developer portfolio site.

C++ Programming Intern — CodeAlpha (Virtual Internship) Jul 10 – Aug 10, 2025

- Completed 4 evaluated C++ tasks (Banking System, CGPA Calculator, Login & Registration System, Sudoku Solver), applying OOP, file handling, and algorithmic problem-solving under internship review.

PROJECTS

Student Performance Analytics — Python, Pandas, NumPy [View repo](#)

Why it matters: shows core data-analysis skills — cleaning, aggregating, and interpreting tabular data — that AI/ML and Python-developer roles look for.

- Built a Python data-analysis project using Pandas and NumPy to process and analyze student performance datasets.
- Computed statistical summaries and performance trends to surface academic insights from raw data.
- Structured the project as a reproducible, script-based data-analysis workflow.

Finance & Expense Manager — Personal Budget Tracker — Python [View repo](#)

***Why it matters:** a fully working personal finance tool with no database or third-party dependencies — just clean architecture and the Python standard library.*

- Built a modular console application in Python with clean separation across authentication, models, storage, manager, and reporting layers.
- Implemented secure user authentication with PBKDF2-HMAC-SHA256 password hashing and unique per-user salts, backed by JSON persistence.
- Designed category-based budgets with real-time overspend warnings, plus reporting (totals, balance, category breakdowns, monthly summaries).
- Documented the full architecture with flowcharts and a UML class diagram covering the authentication flow and cross-module dependencies.

Python-Based Chatbot — Python, LLM API Integration [View repo](#)

***Why it matters:** demonstrates the ability to wire a Python application directly into an LLM API — the same pattern used in production AI features.*

- Built a Python chatbot that integrates an LLM API to generate real-time conversational responses.
- Handled API key configuration and request/response flow, structuring the code for easy provider swaps.

Awais AI — Dual-Model AI Chat Assistant — Android, Claude API + Grok API [View repo](#)

***Why it matters:** gives users one Android app to compare Claude and Grok responses instead of switching between two separate apps.*

- Rapidly prototyped and configured an Ionic/Capacitor Android app offering a ChatGPT-like experience with switchable Claude and Grok (xAI) API backends.
- Configured API key routing, authentication, and billing integration across both the Anthropic and xAI platforms.

Nexus AI Chatbot — Multi-User Chat Application, C++ + Groq API [View repo](#)

***Why it matters:** recreates the core of a real chat platform — auth, roles, admin controls, and live LLM inference — with no web framework.*

- Built a role-based console application with separate User and Administrator login/registration flows, including a key-gated admin registration path.
- Integrated the Groq API (Llama 3.3 70B) for real-time AI chat, with persistent, timestamped conversation history and a command interface (/history, /clear, /exit).
